Developer update

Hi Developers at SIMATS,

After a recent review, we found that your app Spermoscope (com.simats.sperm_detection) is not compliant with one or more of our Developer Program Policies. See below for more information about your app's status and how to correct the issue.

⚠	App Status: Rejected Your app has been rejected and wasn't published due to the policy issue(s) listed below. If you submitted an update, the previous version of your app is still available on Google Play.
🔧	Issue found: Inaccurate Health Apps Declaration The Health Apps declaration form within Play Console that you have provided for your app is inaccurate. Any app that accesses health data and/or offers health-related features must complete the Health Apps declaration form within Play Console. Your app has not met these requirements in accordance with the Health Content and Services policy. We found a discrepancy between your current declaration and the functionalities of the app. This includes instances where irrelevant or excessive categories have been selected, or where appropriate categories have been omitted. During our review, we have identified functionalities that relate to the following categories: • Reproductive and Sexual Health • Healthcare Services and Management Please review and update your selections to ensure accuracy. This includes removing any irrelevant or excessive categories and adding any necessary ones.

Please visit our Help Center Article for more information on accurately declaring the functionalities offered by your app.

Issue details

We found an issue in the following area(s):

- **Full description (en-US)**: **"Spermoscope AI detects active sperm and assesses DNA fragmentation for fertility insights. This application leverages Artificial Intelligence (AI) and Convolutional Neural Networks (CNN) to assess sperm DNA fragmentation, a critical factor in male infertility. By analyzing microscopic images of sperm, the AI detects Active Sperms with high accuracy and speed, providing crucial insights for fertility treatments. The CNN algorithm automates the diagnostic process, reducing human error and enhancing precision in evaluating sperm quality, thus aiding personalized treatment plans and improving assisted reproductive technologies (ART) outcomes. Additionally, doctors can view statistical analyses, such as graphs, to track improvements over time and better assess the effectiveness of treatment plans."**

To bring your app into compliance, follow these steps:

Update your Health apps declaration form. Select all applicable categories.

About the Health Content and Services policy

We don't allow apps that expose users to harmful health content and services.

If your app contains or promotes health content and services, you must ensure your app is compliant with any applicable laws and regulations, and complies with existing Google Play Developer Policies, including Health Apps policy, Privacy, Deception and Abuse policies and Sensitive Events.

If your app provides health features/functionalities or accesses health data to support non-health features, you must complete the Health apps declaration form within Play Console with accurate information.

Action required: Submit an updated app for review

Here's what to do to help get your app on Google Play:

1. Make sure to read the applicable policies or requirements listed below:
    - Health Content and Services policy
2. Make appropriate changes to your app (if possible), and be sure to address the issue described above. You may also want to check your app's store listing for compliance, if applicable.
3. Double check that your app is compliant with all other Developer Program Policies.
4. If you made changes to your app bundle, store listing, or APK, please sign in to your Play Console and submit the update(s).

Contact support

If you've reviewed the policy and feel our decision may have been in error, please reach out to our policy support team. We'll get back to you within 2 business days.

Developer update

Hi Developers at SIMATS,

After a recent review, we found that your app Spermoscope (com.simats.sperm_detection) is not compliant with one or more of our Developer Program Policies. See below for more information about your app's status and how to correct the issue.

App Status: Rejected

Your app has been rejected and wasn't published due to the policy issue(s) listed below. If you submitted an update, the previous version of your app is still available on Google Play.

Issue found: Inaccurate Health Apps Declaration

The Health Apps declaration form within Play Console that you have provided for your app is inaccurate.

Any app that accesses health data and/or offers health-related features must complete the Health Apps declaration form within Play Console. Your app has not met these requirements in accordance with the Health Content and Services policy.

We found a discrepancy between your current declaration and the functionalities of the app. This includes instances where irrelevant or excessive categories have been selected, or where appropriate categories have been omitted.

During our review, we have identified functionalities that relate to the following categories:

- Reproductive and Sexual Health
- Healthcare Services and Management

Please review and update your selections to ensure accuracy. This includes removing any irrelevant or excessive categories and adding any necessary ones.

Please visit our Help Center Article for more information on accurately declaring the functionalities offered by your app.

Issue details

We found an issue in the following area(s):

- **Full description (en-US)**: **"Spermoscope AI detects active sperm and assesses DNA fragmentation for fertility insights. This application leverages Artificial Intelligence (AI) and Convolutional Neural Networks (CNN) to assess sperm DNA fragmentation, a critical factor in male infertility.
